Re: RFB-6407: Maintenance, Service, and Repairs of Emergency Power Systems

BID ADDENDUM NO. 1

ADDENDUM 1: *The contents of this addendum alter and amend the original bid requirements and take precedence over the related items therein. This addendum forms a part of the contract documents. Bidders must acknowledge receipt of all addenda when submitting their bids. Failure to acknowledge receipt may render your bid as non-responsive and ineligible for award. Vendors are responsible for ensuring that they receive all addenda.*

RESPONSES TO WRITTEN REQUESTS FOR INFORMATION

1. *Question: I have a question regarding the quantity of generators in this bid. Included in the bid package there are 11 generators listed, however I am seeing a quantity of 12 generators on the bid pricing template. Please confirm how many generators should be included in this bid package.*

Response: Attachment "A" from the original bid inadvertently omitted one location. A revised Attachment "A" has been included with this addendum to provide information for all twelve locations.

2. *Question: Looking over the requirements being asked for in the testing, we have a question in regards to the areas of name plate ratings. It reads '30% of generator name plate rating. Standard testing is usually 80%. My question is if the 30% should read 80%? That just would lead to another question with interpretation of the load bank testing being asked for. Does that mean the load bank will supplement the rest of the 70% of the gen's capacity? It is a two part question and we just want to be clear how to estimate this testing procedure.*

Response: The 30% generator name plate rating is correct. If the 30% of name plate KW rating under load is not met, the load must be supplemented with a load bank to achieve the 30% of the generator KW rating.

The bid due date will remain 2:00 pm on June 5, 2019.

Standard testing is usually 80%. My question is if the 30% should read 80%? That just would lead to another question with interpretation of the load bank testing being asked for. Does that mean the load bank will supplement the rest of the 70% of the gen's capacity? It is a two part question and we just want to be clear how to estimate this testing procedure.*

Response: The 30% generator name plate rating is correct. If the 30% of name plate KW rating under load is not met, the load must be supplemented with a load bank to achieve the 30% of the generator KW rating.
